FLOWER MESH

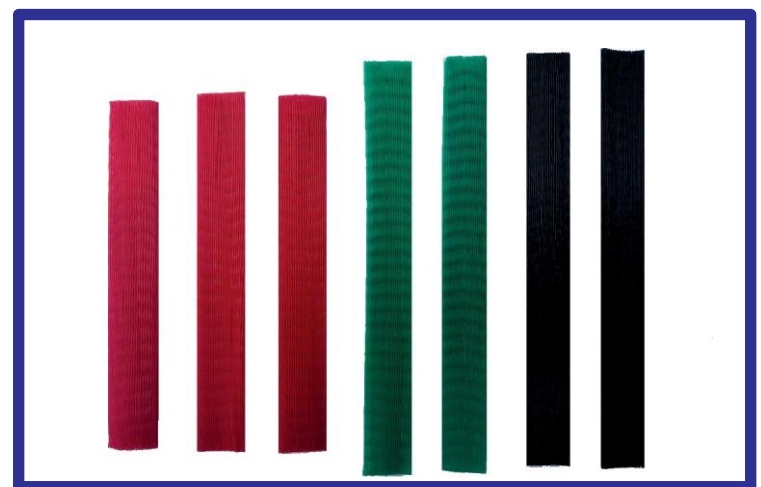

MaquinPRO has over 24 years of experience in the production of plastic materials for floriculture. We excel in the market for our high quality and timely deliveries.

The mesh for gerbera and chrysanthemum is used to protect the flower during transport to the customer's warehouse avoiding the petals to be injured or lost in transit. In addition, by using the mesh you could pack more flowers in each box thus reducing transportation costs.

The mesh for roses is used to increase the bud size before harvest, resulting in more valuable flowers for our clients.
